Question: 1

What mechanism does FortiGate use to avoid sending a file that has been already inspected to FortiSandbox?

- A. FortiGate sends the file name to FortiGuard. FortiGuard checks if a file with that name has been already inspected.
- B. FortiGate sends the file name to FortiSandbox. FortiSandbox checks if it has already inspected a file with that name.
- C. FortiGate sends a hash of the file to FortiSandbox. FortiSandbox checks if it has already inspected a file with that hash.
- D. FortiGate searches its cache of a list of file names that it has already inspected.

Answer: B
