---

Part of the reason why the APT attack becomes difficult to defend is that it uses the vulnerabilities to attack. This kind of zero-day hole usually requires flowers  
A lot of time to research and analyze and produce corresponding defense methods.

- A. True  
B. False

**Answer: A**

Explanation:

### Question: 5

The following figure shows the configuration of the URL filtering configuration file. Regarding the configuration, which of the following statements is correct?

- A. The firewall will first check the blacklist entries and then the whitelist entries.
- B. Assuming that the user visits the [www.exexample.com](http://www.exexample.com) website, which belongs to the categories of humanities and social networks at the same time, the user cannot access the website.
- C. The user visits the website [www.exexample.com](http://www.exexample.com), and when the black and white list is not hit, the next step is to query the predefined URL category entry.
- D. The default action means that all websites are allowed to visit. So the configuration is wrong here.

**Answer: B**
