Questions
& Answers

Version: 7.0

Question: 1

A customer recently performed an ONTAP upgrade and would like to confirm the successful completion of the process.

Which three actions would satisfy this requirement? (Choose three.)

- A. Execute the version command at the cluster shell.
- B. Verify the version from the new AutoSupport that was automatically triggered after an upgrade.
- C. A system Message notification will be shown reboot after a successful upgrade.
- D. Execute the system upgrade-revert show command at the cluster shell.
- E. Execute the system upgrade-revert show-task-status command at the cluster shell.

Answer: A, C, D

Question: 2

You are adding additional node to a single-node cluster.

Which two actions be performed after this upgrade? (Choose two.)

- A. Verify that HA is enabled.
- B. Verify that epsilon is not assigned.
- C. Verify that epsilon is assigned
- D. Verify that HA is disabled

Answer: A, C

Question: 3

Using QoS statistics for a group of volume on one node, you notice that most of the comes from the data layer.

In this scenario, which statement is correct?

- A. There is too much indirect traffic from other nodes.
- B. QoS processing is increasing CPU usage.
- C. The CPU on the node is overhead.
- D. High disk use is increasing CPU usage.

Answer: B

Question: 4

A manager wants a volume to have a guaranteed 300 MB/s of read performance. You explain that you cannot do this on FAS storage running ONTAP 9.3 backed by 10,000 RPM disks. What is the reason for this response?

- A. Throughput floor apply to only iSCSI access.
- B. Throughput floors can only guarantee up to 125 MB/s.
- C. Throughput floors required a license
- D. Throughput floors required AFF.

Answer: D

Question: 5

Exhibit.

Workload	ID	Latency	Network	Cluster	Data	Disk	QoS	MVKA
ms_sql_backup..	1234	4.59ms	62.00us	0ms	4.53ms	0ms	0ms	0ms
ms_sql_backup..	1234	120.22ms	55.00us	0ms	153.00us	0ms	119.99ms	0ms
ms_sql_backup..	1234	99.45ms	88.00us	0ms	186.00us	0ms	99.23ms	0ms
ms_sql_backup..	1234	104.78ms	54.00us	0ms	183.00us	0ms	104.51ms	0ms

A backup administrator notices throughput during backup jobs. While the job is running, you review the QoS output for the target volume.

Referring to the exhibit, which statement is correct?

- A. The volume is encountering the QoS limit.
- B. The networking is slow.
- C. The data layer of the controller is slow.
- D. The traffic is going over an indirect path in the cluster.

Answer: A

Question: 6

Exhibit.

Workload	ID	Latency	Network	Cluster	Data	Disk	QoS	MVKA
cadata-wid1234	1234	12.48ms	74.00us	0ms	835.00us	10.77ms	0ms	0ms
cadata-wid1234	1234	12.12ms	73.00us	0ms	643.00us	10.07ms	0ms	0ms
cadata-wid1234	1234	12.42ms	73.00us	0ms	643.00us	10.13ms	0ms	0ms

Based on the QoS output from the storage controller, your database administrator is complaining of slow read and write performance.

Referring to the exhibit, what be two appropriate actions to improve performance for both reads and writes (Choose two.)

- A. Move the workload to an SSD aggregate.
- B. Apply a QoS maximum policy to the cadata-wid1234 workload.
- C. Add a Flash pool to the existing aggregate.

D. Upgrade the controller's NVRAM

Answer: A, B
