Fortinet

NSE6_FNC-8.5 Exam

Fortinet NSE 6 - FortiNAC 8.5

Version: 4.2

Question: 1

Which connecting endpoints are evaluated against all enabled device profiling rules?

A. All hosts, each time they connect
B. Rogues devices, only when they connect for the first time
C. Known trusted devices each time they change location
D. Rogues devices, each time they connect

Answer: D

Explanation:
FortiNAC process to classify rogue devices and create an organized inventory of known trusted registered devices.

Question: 2

Which agent is used only as part of a login script?

A. Mobile
B. Passive
C. Persistent
D. Dissolvable

Answer: B

Explanation:
If the logon script runs the logon application in persistent mode, configure your Active Directory server not to run scripts synchronously.

Question: 4

What would occur if both an unknown (rogue) device and a known (trusted) device simultaneously appeared on a port that is a member of the Forced Registration port group?

A. The port would be provisioned for the normal state host, and both hosts would have access to that VLAN.
B. The port would not be managed, and an event would be generated.
C. The port would be provisioned to the registration network, and both hosts would be isolated.
D. The port would be administratively shut down.

Answer: C

Question: 5

Which two agents can validate endpoint compliance transparently to the end user? (Choose two.)

A. Passive
B. Dissolvable
C. Mobile
D. Persistent

Answer: CD

Explanation:
Mobile agents use the network transparently.
